```
    {

        // Validate the file upload, ensuring an image is
provided.

        $request->validate([

            'image' => 'required|image|max:5120', // max size
5MB

        ]);

        // Retrieve the uploaded file

        $file = $request->file('image');

        // Generate a unique file name with extension

        $filename = time() . '_' . $file->getClientOriginalName();

        // Create an image instance from the file using
Intervention Image

        $image = Image::make($file);
```
