```
Route::get('/media/download/{filename}',
[App\Http\Controllers\MediaController::class, 'downloadFile'])-
>name('media.download');
```

Testing Download Functionality

While your Laravel server is running, visit:

---

http://127.0.0.1:8000/media/download/yourfilename.jpg

This should initiate a file download in your browser. And keep verifying the correct headers are sent and that the file is downloaded efficiently even under high traffic conditions.

Advanced Techniques for High Traffic Environments

Utilizing Chunked Downloads

For very large files, we can use chunked downloads to further optimize memory usage. Although Laravel's native methods
