- Open the **Kernel.php** file

Here, first navigate to your Laravel project's **app/Console/Kernel.php** file. Within the **schedule()** method, you can define all the scheduled tasks for "myapp." For instance, suppose you want to clear application logs daily; you can add a schedule definition as follows:

```
protected function schedule(Schedule $schedule)

{

    // Clear logs daily at midnight.

    $schedule->command('logs:clear')->daily();

    // Generate summary reports every Monday at 8 AM.

    $schedule->command('reports:generate')->weeklyOn(1, '8:00');

    // Run a custom closure-based task every thirty minutes.

    $schedule->call(function () {
```
