This cron entry calls **php artisan schedule:run** every minute to evaluate and execute scheduled tasks at the appropriate time.

Implementing Recovery Routines

Now the recovery plan is also equally important compared to the backup plan. The Spatie Laravel Backup package provides instructions on how to restore backups. Here, the recovery is typically a manual process in production environments.

So, to restore a backup, first we have to identify the backup file from the backups directory. And then, use your database's command-line tools (like **mysql** for MySQL) to restore the database as shown below:

---

mysql -u your_username -p your_database < /path/to/backup-file.sql

---

For files, simply copy the backup files back to their required locations.

This automated routine really cut down on manual intervention,
