```
    public function handle()

    {

        $this->info('Starting image archival process...');

        // Define the script path relative to the project root

        $scriptPath = base_path('archive_images.sh');

        // Ensure the script exists.

        if (!file_exists($scriptPath)) {

            $this->error('The archive_images.sh script was not found.');

            return 1;

        }

        // Create a Symfony Process to execute the shell script
```
