Counts total users, new users within the last week, total posts, and posts created in the last week.

- Calculates an average metric for user engagement.
- Formats these data points into a structured text report.
- Stores the report in a dedicated **reports** directory inside
- Outputs a success message to the console.

Scheduling Report Generation Command

With the custom command ready, integrate it into Laravel's Scheduler so that it runs automatically at specified intervals. Open **app/Console/Kernel.php** in PhpStorm. Within the **schedule()** method, add an entry for your new command. For example, to run the report generation daily at 4 AM, update the method as follows:

```
protected function schedule(Schedule $schedule)

{
```
