```
php artisan serve
```

Now, navigate We will see Telescope's dashboard populated with live data from your application. The interface allows you to inspect recent requests, exceptions, logs, and queries which gives a strong deep dive into your application's internals.

Integrating Essential Linux-Based Tools

While you might have already set up version control earlier, remember that Git is your steadfast companion in managing code changes. On Linux, you can always check the status of your repository using:

```
git status
```

For advanced Linux users, terminal multiplexers like **tmux** or **screen** allow you to run multiple sessions in one terminal window. Installing tmux is straightforward:
