first commit. After staging, make your initial commit with a clear, descriptive message:

---

git commit -m "Initial commit: Laravel 11 project setup with base configuration"

The clear commit messages are essential for maintaining a clean history and allowing your teammates to understand the purpose of each change.

Establishing Branch Conventions

To ensure a clean workflow, consider using branch naming conventions. For example, you might have branches named or **release/*** to categorize your work. Although setting up branches might not be part of this immediate step, thinking ahead and agreeing on commit and branch conventions within your team is of much help.

Configuring Remote Repositories

To do this, just link your local repository to the remote server by executing the following command. In the below, try to replace
