possess, a mutual termination of nuclear tests would not hurt either of them.

Therefore, if there is a true desire to halt the nuclear arms race, then there can be no objections to a mutual moratorium, and the benefit it brings would be great. But the continuation of nuclear tests—albeit in the presence of somebody's observers—would be nothing else but the same arms race. The U.S. still has time to make the right decision. Imagine how much it would mean and not only for Soviet-American relations but a moratorium on nuclear tests, of course, is still not a radical solution to the problem of preventing nuclear war.

In order to accomplish that, it is necessary to solve the whole complex of inter-related matters which are the subject of the talks between our delegations in Geneva. It is quite obvious that in the final analysis the outcome of these talks will be decisive in determining whether we shall succeed in stopping the arms race and eliminating nuclear weapons in general. Regrettably, the state of affairs at the Geneva talks gives rise to serious concern.

We should very thoroughly and from every angle, once again examine what could be done there. And I want to propose to you the following formula: the two sides agree to a complete ban on space attack weapons and a truly radical reduction, say by 50%, of their corresponding nuclear arms.

In other words, we propose a practical solution of the tasks which were agreed upon as objectives of the Geneva negotiations—not only will the nuclear arms race be terminated, but the level of nuclear confrontation would be drastically reduced, and at the same time an arms race in space would be prevented. As a result, strategic stability would be strengthened
