In 1971, to commemorate the wall's tenth anniversary, Tajiri compiled his images in a small book that he printed on his own offset press in Baarlo. The title, *The Wall Die Mauer Le Mur* (fig. 3.2), is a nod to the three languages featured on much of the signage of the Western allied sectors of West Berlin. The book comprises the artist's exposed negatives, rendered in facsimile strips, and covers his entire view of the Wall. Tajiri's survey prints begin on the cover and segue into the bound volume. Each frame is printed as a transparency but remains sized at the same scale as its negative—the size of a postage stamp—and thus is discernable only when brought close to the naked eye. The only text appears on the cover, with no punctuation and only one word on each line, oriented vertically. Tajiri writes, opposite the title, "This book attempts to contain the entire twenty-seven kilometers of the Berlin WALL which will be 10 years this month August 1971 Printed at 100 copies TAJIRI X Press Baarlo Holland." Tajiri's *The Wall Die Mauer Le Mur* tempered the megalithic scope of the Wall with a close-up documentation, barely discernable to readers and presented with limited public reach. Tajiri's steering of his work away from broader public review sparks a productive tension, given the engaged, public character of his study. For a sculptor who regularly placed finished large installations in city squares, on bridges, and in museums—including several that were sited in the United States—this project stands out for its intimate scale, limited print run, and status as remaining largely unknown in his country of origin. Tajiri shared single images of his survey and expanded its scope in multiple formats throughout his career, under revision as a concept for documenting the Wall, but did not print the entire body of work from his study until 2005, when he published the project in a book titled *The Berlin Wall*. Even in this version, he suggested that his work was unfinished and future editions would be forthcoming.

Within Tajiri's oeuvre, the Berlin Wall project functions as both an aberration and a cipher. Scholars of his long-running Wall project have alternately referred to it as a photographic survey, a historical documentation, or land art, among other distinctions. Christoph Schaden contends that Tajiri's project renders the Wall's "[metamorphosis] into an unintentional work of art."[9] Helen Westgeest suggests that in Tajiri's work "the wall appears to move like an endlessly long and monumental sculpture through and around the city."[10] Tajiri spawned a series of Wall projects that he would continue to revisit throughout the rest of his career. Though he
