memory in Berlin: the Topography of Terror, a former Nazi-era Secret Police headquarters and notorious prison. The foundations of the site were rediscovered and excavated in 1987 during preparations for the 750th anniversary of Berlin. The area then reopened as an open-air museum. Since 1989, it also sits directly below one of the largest remaining continuous sections of the Berlin Wall, making it a site of layered historical archaeology and a marquee tourist attraction. Despite the location of this image along the former border, in this photograph, material remnants of the Berlin Wall are deliberately left out of Freed's field of vision. And though the sign for the Topography of Terror is nearly out of sight, it is nonetheless framed in the background of this image. Freed reminds us of the power of juxtaposing various layers of history and memory by using the Berlin Wall, to imagine the present around what traces remain and what new possibilities arise through this coexistence in post-Wall Berlin.
