other side of the table and a blonde woman with spiked hair leaning nearby on the fence by the Wall turn toward them with reserved smiles.

In another photo (fig. 5.8), a frontal portrait of Lorde taken by Schultz on a different day, Lorde makes eye contact with the photographer's lens, as she maintains an oblique stance, her torso and legs askew to the camera. Lorde wears an untucked, salmon-colored shirt and blue jeans and carries her own camera, which dangles from her hands. Behind her is a remnant of the Berlin Wall, apparently untouched by graffiti artists or *Mauerpeckers* but altered through the posted political signs dating to the first elections of a reunified Germany. The question, rather than the promise, of a reunified German future seems to weigh on the scene. Through this image and Lorde's multidisciplinary writing in this period, we are reminded that even after its "fall," the Wall remained a site of projection and declaration as it was transformed into a ruin in Berlin.[30] As a result, Lorde's focus and skepticism in this period were centered on the waves of racially motivated violence erupting on Berlin and German streets.
