display traces of poorly erased Nazi iconography or Holocaust memorials that go unnoticed. In each case he challenges himself and others to measure the benefits of reconciliation against the traumas of the past by negotiating the space between the particular and the collective.

Most of Freed's photographs of "Germany," presented here as a unified formulation, not as East or West, were taken in the western half. Though the Cold War had divided the country when Freed started this work, his sense of the oneness of Germany serves his greater interest in the continuities across Germany's history through numerous moments of national unification and division. Freed tries to seek out the ghosts and traces of World War II in order to grapple with Germany's dual processes of attempted rebuilding and reconciliation. In this set of images he does this in one prominent way by indexing his encounters with Germans who struggle with how to memorialize their own pasts. In his own pursuit of sites of Jewish mourning, Freed captures individuals who are attempting to handle the memory of the past, which is routed through the powerful effect of World War II on the entire nation along with the recent memory of the Holocaust. He meets Germans at moments of grieving, reckoning, and political reinvention and, in doing so, strikes a balance between suspicion and empathy. His photographic perspective gives him a self-conscious form of mutuality.

Freed's images cover multiple cities, vantage points, and landscapes of Germany. Eight images would later comprise a central subsection of *Made in Germany* devoted to the Berlin Wall—a symmetry in the book that alludes to the idea of a divided city at the heart of a bifurcated nation. The images mix the heightened tensions of August 1961 and the new normal in the following four years, as each side adjusted to life along the Wall. When Freed returned after the Berlin Crisis, he adjusted his scope to account for the evolving landscape. The section is bookended by two of his American GI images, although the image of his single shot, depicting the unnamed black American soldier at the nascent Wall, remains absent from this portfolio of images. Other images include a view of East German troops patrolling the border zone with German shepherds, children playing along the Wall with rubble from it nearby, and a memorial set up to honor Heinz Schöneberger, a border crosser who was killed near the Heinrich-Heine-Strasse crossing. One image, taken from atop an observation deck built after the Berlin Crisis subsided, shows a trio of figures descending the stairs and a long boulevard with trolley tracks trailing outward past the vanishing point.
