Auschwitz?] also published in 2009, which attempts to demonstrate how Jewish thinkers—many of the same ones who theorize antisemitism—have manipulated Holocaust memory for similarly reactionary, Western imperialist ends.

The Auschwitz book bears a preface by Alain Badiou, Segré's teacher. Over the past several decades, Badiou's star has risen to surprising heights in the American academy, where he is known mainly as a theorist of the "event," of subjectivity, and of aesthetics, and where his most radical essays on Jewish issues are only beginning to be discussed.[8] In his preface to Segré's book, Badiou refers to the "philosemitism" of those intellectuals who denounce Muslim violence against Jews as a dangerous provocation. These professional philosemites, he says, have proclaimed themselves "the unique public defenders of the Rights of Man, of Ethics, of Democracy, and of Western Civilization."[9] But all the supposedly universalist values they make a show of defending serve as a mere smokescreen, a dangerous disguise designed to hide the "real content" of their discourse, which is communitarian, non-universal, in other words Jewish and American.

In 2011, Badiou teamed up with the journalist Éric Hazan to denounce, once again, those intellectuals who worry about the "new antisemitism" in a short book, entitled *Antisémitisme partout: Aujourd'hui en France* [Antisemitism Everywhere: in France Today]. Badiou and Hazan intend their ironic title to designate not the actual increase in antisemitism in contemporary France but rather the supposed atmosphere of hysteria surrounding it, in which "inquisitors" seek to condemn Muslim perpetrators and their defenders on the far left to further their right-wing political agenda. Here, Badiou and Hazan blithely dismiss the gravity of the attacks against Jews, but their real motivation is to defend themselves, which is to say the French far left, against charges of aiding and abetting the criminals with their anti-Zionist rhetoric. Like Ramadan and Segré, Badiou and Hazan attack the familiar targets—Finkielkraut, Lanzmann, Glucksmann, Bernard-Henri Lévi, and others—most of whom, they point out, come from the left themselves, their political credentials enabling them to denounce those on the (farther) left with more credibility. Badiou and Hazan resort to the same sort of reasoning as Ramadan and Segré. On the one hand, discussion of antisemitism in France serves to distract from Israel's repressive policies in the West Bank as Ramadan would have it.[10] On the other, Israel itself serves as a distraction from the even more sinister designs of the United States, as Segré maintains.[11] In both cases, these intellectuals commit the crime of violating universalism.
