military supplies to Israel to refuel at its air bases). And, while Europeans began to view themselves as indispensible brokers of peace in the Middle East, Israel's foreign minister Abba Eban famously depicted their agreement as "oil for Europe" rather than "peace for the Middle East."[36]

Then, as often now, Israel views Europeans as insufficiently sensitive to the threats posed by its neighbors and, in consequence, its need to defend itself. The Member States have, in turn, "been equally critical of Israeli actions in the occupied territories and by what they perceive as Israel's overreliance and, at times, the disproportionate use of military force to ensure its security." [37] Israel thus marginalized the Europeans by denying them any direct role in negotiations with the Palestinians, a situation seen once again in the aftermath of the 2014 Gaza war. It was the Egyptians who brokered the most recent truce between Israel and the Palestinians.

Nonetheless, in an ironic twist, the European Community that seemed swift to sacrifice Israel's security to guarantee its oil and protect its commercial dealings with the Arab world is now the larger more integrated European Union on whom Israel depends for its financial health. With the EU Israel's top trading partner, Israel is ill-equipped to reverse what it regards as the EU's longstanding antipathy to its security concerns. Additionally, in the absence of the working definition—one that BDS activists acknowledged had effectively discredited them—the Commission was free to adopt more stringent sanctions against Israeli settlements. The EU's subsequent censure of Hezbollah's "military wing" proved so disingenuous that even the most sanguine and enthusiastic coverage of it noted the Sisyphean challenge that attends distinguishing the group's "military operations." According to the *New York Times*, "complicating the application of the decision is the intense secrecy surrounding Hezbollah's military activities."[38]

Conclusion

I began with the assertion that tracking antisemitism within the EU necessitates that we reveal the deceptive gestures that inhibit the possibility of doing so. I focused most on one effort (i.e., the working definition) that proved so illusive that its existence was later denied. But, while the definition's chief limitation was its lack of legal standing, its greatest asset was its clear depiction of anti-Zionism's antisemitic manifestations.

A nuanced appreciation of the working definition helps explain the timing of its withdrawal from the website. The Agency removed the definition shortly before the Commission sanctioned Israeli institutions in those ter-
