casualties occurred due to the artillery shelling. At Muntho Dhalo, which was an important logistic base in the Batalik sector, the air force and artillery caused heavy casualties – the Pakistan Army lost five officers and many troops in one of these bombardments. The gunners innovated and perfected their skills of direct shooting and the performance of the 155mm Bofors gun was indeed praiseworthy.

- The invaluable contribution of the Indian Air Force during the Kargil war in offensive air strikes against enemy strong points and administrative bases, aerial imagery and logistics support by its fighter and transport aircraft, including helicopters, proved to be a war-winning factor. Air operations were named Operation Safed Sagar, in which our air force demonstrated to the world how air power could be applied at such high altitudes even with constraints like non-violation of the air space beyond the LoC. The operations branches at the Army and Air HQ worked in close coordination during this war. As ADGMO, I conducted the briefing of ground operations for the air chief and senior commanders at the Air HQ during the crucial phase of this conflict.
- The crucial role played by the Indian Navy is a lesser-known fact of this war. The navy was put on a full alert from 20 May 1999, in order to meet any challenge at sea and for surveillance. To put pressure on Pakistan, strike elements from the Eastern Fleet were moved to the North Arabian Sea. This use of naval power opposite the Makaran coast forced Pakistan Navy to move its fleet from Karachi and get into a defensive mode. We also moved some amphibious force elements from Andaman and Nicobar islands to the western coast. This naval operation was named 'Talwar' and proved to be an effective deterrent to escalation of hostilities beyond Kargil and also helped to safeguard our maritime interests.
- The Indian Army suffered a total of 522 fatal casualties, which included twenty-six officers and twenty-three junior commissioned officers, and over a thousand were wounded as
