```
        ),

        "zara" => array (
            "physics" => 31,
            "maths" => 22,
            "chemistry" => 39
        )
    );

    /* Accessing multi-dimensional array values */
    echo "Marks for mohammad in physics : " ;
    echo $marks['mohammad']['physics'] . "<br />";

    echo "Marks for qadir in maths : ";
    echo $marks['qadir']['maths'] . "<br />";

    echo "Marks for zara in chemistry : " ;
    echo $marks['zara']['chemistry'] . "<br />";
?>

  </body>
</html>
```

This will produce the following result –

```
Marks for mohammad in physics : 35
Marks for qadir in maths : 32
Marks for zara in chemistry : 39
```

5.2.6 Extracting Multiple Values

To copy all of an array's values into variables, use the list() construct:

```
list ($variable, ...) = $array;
```

The array's values are copied into the listed variables in the array's internal order. By default that's the order in which they were inserted. Here's an example:
