```
$subjects = array("physics", "chem", "math", "bio", "cs", "drama", "classics");
```

We can remove the "math", "bio", and "cs" elements by telling array_splice() to start at position 2 and remove 3 elements:

```
$removed = array_splice($subjects, 2, 3);
// $removed is array("math", "bio", "cs")
// $subjects is array("physics", "chem", "drama", "classics")
```

If you omit the length, array_splice() removes to the end of the array:

```
$removed = array_splice($subjects, 2);
// $removed is array("math", "bio", "cs", "drama", "classics")
// $subjects is array("physics", "chem")
```

If you simply want to delete elements from the source array and you do not care about retaining their values, you do not need to store the results of array_splice():

```
array_splice($subjects, 2);
// $subjects is array("physics", "chem");
```

To insert elements where others were removed, use the fourth argument:

```
$new = array("law", "business", "IS");
array_splice($subjects, 4, 3, $new);
// $subjects is array("physics", "chem", "math", "bio", "law", "business", "IS")
```

The size of the replacement array does not have to be the same as the number of elements you delete. The array grows or shrinks as needed:

```
$new = array("law", "business", "IS");
array_splice($subjects, 3, 4, $new);
// $subjects is array("physics", "chem", "math", "law", "business", "IS")
```

To insert new elements into the array while pushing existing elements to the right, delete zero elements:

```
$subjects = array("physics", "chem", "math');
$new = array("law", "business");
array_splice($subjects, 2, 0, $new);
// $subjects is array("physics", "chem", "law", "business", "math")
```

Although the examples so far have used an indexed array, array_splice() also works on associative arrays:

```
$capitals = array(
  'USA'           => "Washington",
  'Great Britain' => "London",
  'New Zealand'   => "Wellington",
  'Australia'     => "Canberra",
  'Italy'         => "Rome"
  'Canada'        => "Ottawa"
);

$downUnder = array_splice($capitals, 2, 2); // remove New Zealand and Australia
$france = array('France' => "Paris");

array_splice($capitals, 1, 0, $france);      // insert France between USA and GB
```
