9.9.6 Simulating HTTP Connections

When writing PHP scripts, it is not necessary to understand every detail of the HTTP protocol. We would be straying to include a treatise here, but you ought to have enough understanding so that you could simulate a connect by using telnet. You may know that Web servers listen on port 80 by default. HTTP is a text-based protocol, so it's not hard to telnet directly to a Web server and type a simple request.
