```
print_r(getrusage());
/* prints
Array
(
    [ru_oublock] => 0
    [ru_inblock] => 0
    [ru_msgsnd] => 2
    [ru_msgrcv] => 3
    [ru_maxrss] => 12692
    [ru_ixrss] => 764
    [ru_idrss] => 3864
    [ru_minflt] => 94
    [ru_majflt] => 0
    [ru_nsignals] => 1
    [ru_nvcsw] => 67
    [ru_nivcsw] => 4
    [ru_nswap] => 0
    [ru_utime.tv_usec] => 0
    [ru_utime.tv_sec] => 0
    [ru_stime.tv_usec] => 6269
    [ru_stime.tv_sec] => 0
)

*/
```

That may look a bit cryptic unless you already have a system administration background. Here is the explanation of each value (you don't need to memorize these):

- ru_oublock: block output operations
- ru_inblock: block input operations
- ru_msgsnd: messages sent
- ru_msgrcv: messages received
- ru_maxrss: maximum resident set size
- ru_ixrss: integral shared memory size
