Accessing Cookies with PHP

PHP provides many ways to access cookies. Simplest way is to use either $_COOKIE or $HTTP_COOKIE_VARS variables. Following example will access all the cookies set in above example.

```
<html>

   <head>
      <title>Accessing Cookies with PHP</title>
   </head>

   <body>

      <?php
         echo $_COOKIE[“name”]. “<br />”;

         /* is equivalent to */
         echo $HTTP_COOKIE_VARS[“name”]. “<br />”;

         echo $_COOKIE[“age”] . “<br />”;

         /* is equivalent to */
         echo $HTTP_COOKIE_VARS[“age”] . “<br />”;
      ?>

   </body>
</html>
```

You can use isset() function to check if a cookie is set or not.

```
<html>

   <head>
      <title>Accessing Cookies with PHP</title>
```
