Timeout

This value sets the default number of seconds before any HTTP request will time out. If you set PHP's max_execution_time to longer than this value, PHP will keep grinding away but the user may see a 404 error. In safe mode, this value will be ignored; you must use the timeout value in php.ini instead

DocumentRoot

Remember

You can associate any file extension with PHP like .php3, .php5 or .htm.

DocumentRoot designates the root directory for all HTTP processes on that server. It looks something like this on Unix –

DocumentRoot ./usr/local/apache_1.3.6/htdocs.

You can choose any directory as document root.

AddType

The PHP MIME type needs to be set here for PHP files to be parsed.

AddType application/x-httpd-php .php

AddType application/x-httpd-phps .phps

AddType application/x-httpd-php3 .php3 .phtml

AddType application/x-httpd-php .html

Action

You must uncomment this line for the Windows apxs module version of Apache with shared object support –

LoadModule php4_module modules/php4apache.dll

or on Unix flavors –

LoadModule php4_module modules/mod_php.so

AddModule

You must uncomment this line for the static module version of Apache.

AddModule mod_php4.c
