Example:

```
<?php

$val1 = 50.85;
$val2 = 654.26;

$sum = $val1 + $val2;

echo $sum;

?>
```

String

Hold letters or any alphabets, even numbers are included. These are written within double quotes during declaration. The strings can also be written within single quotes but it will be treated differently while printing variables.

Example:

```
<?php

$name = "Jone";
echo "The name of the Geek is $name \n";
echo 'The name of the geek is $name';

?>
```

Output

```
The name of the Geek is Jone
The name of the geek is $name
```

NULL

These are special types of variables that can hold only one value i.e., NULL. We follow the convention of writing it in capital form, but its case sensitive.

Example:

```
<?php
```
