`$interval->startDate` is an instance of `StartDate` which is **always** (no matter what) `Y-m-d 00:00:00` and `$internal->endDate` is an instance of `EndDate` which is **always** (no matter what) `Y-m-d 23:59:59`. In Paddle, the smallest unit you can use when using their reports is days. So a report always shows data from `00:00:00` to `23:59:59`. We'll have a central object that handles this logic.
