```php
class SendPayoutNotificationJob implements ShouldQueue
{
  use Dispatchable, InteractsWithQueue, Queueable, SerializesModels;

  public int $tries = 3;

  public array $backoff = [10, 30];

  public function __construct(
    private readonly User $user,
    private readonly string $payoutUuid,
    private readonly TransactionReport $report,
  ) {}

  public function handle(): void
  {
    $this->user->notify(
      new PayoutSentNotification($this->payoutUuid, $this->report)
    );
  }
}
```

Once again, we use the `$tries` and `$backoff` properties discussed earlier. The Notification is also straightforward:
