Now laravel-backup will store the backup on your local storage and S3 as well. You also need to configure S3 credentials:

```
AWS_ACCESS_KEY_ID= ...
AWS_SECRET_ACCESS_KEY= ...
AWS_DEFAULT_REGION=us-east-1
AWS_BUCKET=backups
AWS_USE_PATH_STYLE_ENDPOINT=false
```

The last thing we need to do is to schedule the `backup:run` command:

```
protected function schedule(Schedule $schedule): void
{
  if (app()->isProduction()) {
    $schedule->job(SendPayoutsJob::class)->monthly();

    $schedule->command('backup:run')->daily();
  }

  $schedule->job(CleanUpExpiredTransactionReportsJob::class)->daily();
}
```
