It took only 24ms. There are some instances where it took 6ms and others where it took 40ms. Of course, it varies but the difference is huge.

Before the composite index, the numbers were:

- **413ms** per job
- 40 jobs so **16s**

After the composite index:

- 24-50ms per job
- 40 jobs so 1-2s

This one index resulted in an ~8-10x performance improvement. And it took only 40-60 minutes.
