```
Output:
Array
(
    [0] => Rita
    [1] => Sue
    [2] => Bob
)
Array
(
    [0] => Alice
    [1] => Rita
    [2] => Sue
    [3] => Bob
    [4] => Russell
)
```

`array_slice` fetches the sequence of elements specified by its second (offset) and third (length) parameters and returns those elements as a new array. Here we've specified that we want a sequence of three elements starting at index 1. Note that the original array is not altered.

Combining Arrays

A very simple way to join two arrays together is to use the + operator like this: `$array1 + $array2;`. When called with two arrays as operands, this will append the right-hand array to the left and return a new array. If two keys are present in both operand arrays, then the left-hand elements are given priority.

```
$myArr1 = [1, 2];
$myArr2 = [3, 4, 5, 6];

$myAssocArr1 = ['lang' => 'PHP', 'ver' => '8.4'];
$myAssocArr2 = ['engine' => 'Zend', 'ver' => '4.4'];

print_r($myArr1 + $myArr2);
print_r($myAssocArr1 + $myAssocArr2);
```
