It is possible to queue up multiple autoloading functions with `spl_autoload_register()`, every time class autoloading is triggered, the registered functions will be called in order until the required class is loaded. The following will demonstrate.

Copy `./MyApplication/SubNamespace/ThisClassOverHere.php` to a new file with a `.inc` extension:

```
$ cp ./MyApplication/SubNamespace/ThisClassOverHere.php ./MyApplication/
SubNamespace/ThisClassOverHere.inc
```

Next, add the following code to a new file…

```
// multi_autoload.php
spl_autoload_register(function ($class) {
    $fullPath = __DIR__ . DIRECTORY_SEPARATOR
        . str_replace("\\", DIRECTORY_SEPARATOR, $class) . '.inc';

    if (file_exists($fullPath)) {
        print "Loading {$class} from {$fullPath}" . PHP_EOL;
        require $fullPath;
    }
});

spl_autoload_register(function ($class) {
    $fullPath = __DIR__ . DIRECTORY_SEPARATOR
        . str_replace("\\", DIRECTORY_SEPARATOR, $class) . '.php';

    if (file_exists($fullPath)) {
        print "Loading {$class} from {$fullPath}" . PHP_EOL;
        require $fullPath;
    }
});

$class = new \MyApplication\SomeClass();
```

… and run it:

```
$ php multi_autoload.php
Loading MyApplication\SomeClass from /usr/src/myapp/MyApplication/
SomeClass.php
```
