The full list of constants is as follows.

Table 7-2. *Mathematical constants*

Constant	Approximate Value	Description
M_PI	3.14159265358979323846	*pi*
M_E	2.7182818284590452354	*e*
M_LOG2E	1.4426950408889634074	$log_2(e)$
M_LOG10E	0.43429448190325182765	$log_{10}(e)$
M_LN2	0.69314718055994530942	$log_e(2)$
M_LN10	2.30258509299404568402	$log_e(10)$
M_LNPI	1.14472988584940017414	$log_e(pi)$
M_PI_2	1.57079632679489661923	*pi/2*
M_PI_4	0.78539816339744830962	*pi/4*
M_1_PI	0.31830988618379067154	*1/pi*
M_2_PI	0.63661977236758134308	*2/pi*
M_SQRTPI	1.77245385090551602729	pi^{-2}
M_2_SQRTPI	1.12837916709551257390	$2/pi^{-2}$
M_SQRT2	1.41421356237309504880	2^{-2}
M_SQRT3	1.73205080756887729352	3^{-2}
M_SQRT1_2	0.70710678118654752440	0.5^{-2}
M_EULER	0.57721566490153286061	Euler's constant γ

Built-In Functions

Finally, to round out the base language mathematical toolkit, PHP has many built-in functions of the kind you should expect to see in any general-purpose programming language. In addition to functions for performing common computations such as square roots, logarithms, or exponents of *e*, there are also utility functions (such as number base conversion, testing for infinite values, and so on). Most of them are wrappers around the equivalent function in C.

Here's the full list of core mathematical functions in PHP 8.
