Table 7-3. *Mathematical functions*

Function	Description
`abs(n)`	Absolute value
`acos(n)`	Arc cosine
`acosh(n)`	Inverse hyperbolic cosine
`asin(n)`	Arc sine
`asinh(n)`	Inverse hyperbolic sine
`atan2(n1, n2)`	Arc tangent of two variables
`atan(n)`	Arc tangent
`atanh(n)`	Inverse hyperbolic tangent
`ceil(n)`	Round fractions up
`cos(n)`	Cosine
`cosh(n)`	Hyperbolic cosine
`deg2rad(n)`	Returns radian equivalent of n degrees
`exp(n)`	Calculates e^n
`expm1(n)`	exp(n) - 1, accurate when n close to 0
`fdiv(n1, n2)`	IEEE float division by zero non-fatal
`floor(n)`	Round fractions down
`fmod(n)`	Returns remainder (modulo) as float
`hypot(n)`	Returns hypotenuse of a RA triangle
`intdiv(n1, n2)`	Integer division
`log10(n)`	Base-10 logarithm
`log1p(n)`	log(1 + n), accurate when n close to 0
`log(n, b)`	Natural logarithm or log base b if set
`max(n1, ...nX)`	Find the highest value in all n
`max(arr)`	Find the highest value in array

(*continued*)
