Table 9-5. *DateInterval/DatePeriod period strings*

Y	Years
M	Months
D	Days
W	Weeks

You can combine designators; the largest units must always be to the left.

```
$dt = new DateTimeImmutable('@1725148800');
print $dt->format(DateTime::COOKIE) . PHP_EOL;

print $dt->add(new DateInterval("P1D"))
    ->format(DateTime::COOKIE) . PHP_EOL;

print $dt->add(new DateInterval("P1Y1D"))
    ->format(DateTime::COOKIE);

Output:
Sunday, 01-Sep-2024 00:00:00 GMT+0000
Monday, 02-Sep-2024 00:00:00 GMT+0000
Tuesday, 02-Sep-2025 00:00:00 GMT+0000
```

Any interval period shorter than a day must be preceded by the letter T and the following designators:

Table 9-6. *DateInterval/DatePeriod time strings*

H	Hours
M	Minutes
S	Seconds

Here's how to use them:

```
print $dt->add(new DateInterval("PT5H10M20S"))
```
