```
$midnight = new DateTime('26-Oct-2025 00:00:00 BST');
$threeHoursLater = new DateTime('26-Oct-2025 02:00:00 GMT');
print $midnight->diff($threeHoursLater)->format('%h hours');
```

```
Output:
3 hours
```

… demonstrating that `DateTime` and `DateInterval` are able to take DST changes into account in their calculations. Your own code might not be DST-aware, however, so take care when iterating date periods or adding/subtracting units of time.
