Table 11-36. *Twig miscellaneous operators*

`|`	Filter - `seq|join(', ')`
`..`	Range - `{% for i in 1..10 %}`
`~`	Concatenate string with explicit type cast - `cat ~ ' the cat.'`
`.` `[]`	Access element in a mapping/sequence - `user.name`, `collection[1]`
`?:`	Ternary - `value ? var : 'default'`
`??`	Null coalesce - `value ?? 'default'` creates and assigns `value` if undefined
`...`	Spread operator, same as PHP
`=>`	Arrow function, same as PHP (see below)

Twig Functions

A number of functions are provided by Twig for use in template expressions; the syntax for calling them is exactly the same as PHP. A full list of functions plus documentation links can be found at https://twig.symfony.com/doc/functions/index.html, and some commonly used functions are given below:

Table 11-37. *Twig functions*

`constant()`	Access a PHP global or class constant
`date()`	Creates a `DateTime` object from a PHP date format compatible string
`dump()`	Output debug info for a var, (`Twig\Extension\DebugExtension` loaded, debug option set)
`html_classes()`	With `Twig\Extra\Html\HtmlExtension` loaded, generates an attribute string
`min()` `max()`	Get min/max values in a sequence or mapping
`random()`	Return random element from sequence, character from string, or number from range
