Microsoft, further assisted by Hewlett Packard (HP) and Intel, have come forward to support this project in helping to create a community of police personnel across the country and provide computer education to the children of cops. This project is history in the making in the chain of police reforms.

* * *

I strongly believe that life is for giving one's maximum with whatever resources one has or can muster by proper and legitimate means. Life is for constant action based on constant vigil.

In my case, life continues to overflow with rewards and results. This I attribute to my parents' blessings and Divine Grace. Most of all, if an individual has all the five senses intact and all limbs in good condition, there has to be a special reason with a special responsibility to attain the maximum potential. Age is not a bar. It is the mental attitude that matters.

It is this sense of responsibility, or call it consciousness, that keeps me going. This is my inner driving force (as I know from within).

I sometimes ask myself: Why did I get the most caring parents? The best-quality education from inspiring teachers? The most supportive family and friends? The best service to serve in? And good health so far?

And, most of all, why was I born in the most spiritually rich country of the world that has accumulated a wealth of wisdom over millennia?

My aim in life is to go on and on …

As long as I can …

Deliver as much as is possible in this very lifetime …

I remain grateful for all that happened, through whomsoever it has happened, and for all that I have …
