when, after all that, we won the Amnesty International Reporting Award for our coverage of the country.

But things are never easy for more than a minute at a time. The thing about WikiLeaks, right from the start, is that we were subject to hostile fire from the left as much as the right. You think you have natural allies, but, when you're dealing with material this sensitive, and with journalists under such economic pressure in a culture of distrust, you find that everywhere you turn there are people waving their finger at you. That's fine, so far as it goes, and it must come with the territory, but it's vexing to find yourself in conflict with people you thought were on the same side. During the Kenyan campaign, we came across a very important book by Michaela Wrong called *It's Our Turn to Eat*. The book gave a detailed insight into the ways of Kenyan corruption and was banned there, or banned in the sense that no one would distribute it and no bookseller would stock it. And so, seeking to expose the immorality of the ban and ensure that Kenyans could gain access to the text despite the actions of their government, we outwitted the censor by leaking on the site a typeset PDF of the book. What we failed to outwit, however, or in any way foresee, was the author's sense of copyright. Michaela Wrong erupted. She felt that we were robbing her not only of her royalties, but also, in some way, of the credit to which she felt she was her due.

I think I made the point that such a book, such an excellent book, might originally have been her baby, but it was now out there in the world, and had captured the attention and imagination of the people of Kenya – it was now bigger than her alone. I eventually saw her argument in terms of how our posting of it might eat into Western sales, so I put her in touch with our friend Mwalimu Mati, who had been involved in so much of our work in Kenya, suggesting that he could buy the rights to distribute the book in Kenya in paper and electronic form. But the author was slighted and remained so. We were trying to create deterrents and reforms in Kenya, and these people, these smart people, were attacking us for not respecting democracy by insulting copyright law. I found the whole thing baffling, but another early lesson in the complications of political commitment. People have their different priorities, for sure, and it would be a mistake to assume that people who were critical of the authorities were immune from criticism of each other. The left has always been provincial in that way, and I wrongly imagined the issues were much bigger in all our minds. But you
