```
use Laravel\Fortify\TwoFactorAuthenticatable;

class User extends Authenticatable

{

    use TwoFactorAuthenticatable;

    // ...

}
```

Testing Two-Factor Authentication

Within the **config/fortify.php** file, we have to confirm that the two-factor authentication options are enabled. This can bedone by verifying that the **features** array includes two-factor authentication as below:

```
'features' => [
```
