```
    public function run()
    {
        // Insert sample posts into the 'posts' table
        DB::table('posts')->insert([
            [
                'title' => 'First Post',
                'content' => 'This is the content of the first post.',
                'user_id' => 1,
                'created_at' => Carbon::now(),
                'updated_at' => Carbon::now()
            ],
```
