Customizing Alerts for Proactive Monitoring

To further enhance the monitoring setup, we can add a custom alert setting that sends notifications through email or Slack when an error of "critical" level is logged:

```
'alerts' => [

    'critical' => [

        'enabled'   => true,

        'channels' => ['mail', 'slack'],

        'mail'       => [

            'to'         => 'devteam@example.com',

            'subject' => 'Critical Error in myapp',

        ],
```
