```
use App\Notifications\UserAlertNotification;

use Illuminate\Http\Request;

class DashboardController extends Controller

{

    public function show()

    {

        // Assume we are sending an in-app alert to the currently authenticated user.

        $user = auth()->user();

        // Prepare a sample alert message and send the notification.

        $alertMessage = 'You have a new system update available!';
```
