In the above, we iterate over the current user's unread notifications and display them as alerts. Each notification shows the message, type (which can be styled with corresponding CSS classes), and the timestamp.

If youn want to further enhance usability, you might allow users to mark notifications as read as Laravel provides a method to mark all notifications as read:

---

href="{{ route('notifications.markAsRead') }}">Mark all as read

---

We then create a route and corresponding controller method to
