handle this:

```
// In routes/web.php

Route::get('/notifications/mark-as-read',
[App\Http\Controllers\NotificationController::class, 'markAsRead'])-
>name('notifications.markAsRead');

// In app/Http/Controllers/NotificationController.php

namespace App\Http\Controllers;

use Illuminate\Http\Request;

class NotificationController extends Controller

{

    public function markAsRead(Request $request)

    {

        auth()->user()->unreadNotifications->markAsRead();
```
