```
    }

    // Optionally, you can add a toVonage() method for Laravel 9+.

}
```

In the above code, the **via()** method ensures that the notification is sent both as an email and an SMS. The **toMail()** method constructs the email using Laravel's MailMessage, while the **toNexmo()** method builds an SMS using Nexmo's driver.

Configuring Environment Variables for SMS Notifications

To allow Laravel's notification system to send SMS messages, you must configure the SMS driver's credentials. For the built-in Nexmo SMS channel, you need to access and open the **.env** file and add the following lines:

```
# For Nexmo SMS notifications (Laravel 8 or earlier):

NEXMO_KEY=your-nexmo-key
```
