through Pusher, making it available to all clients subscribed to the “chat” channel.

Setting up Laravel Echo

Installing Laravel Echo and Pusher JS

We will need to install both Laravel Echo and the Pusher JavaScript library. In your project's root, run:

---

npm install --save laravel-echo pusher-js

After installation, compile your assets using:

---

npm run dev

This will update your JavaScript bundle with Laravel Echo and Pusher.

Configuring Laravel Echo
