In your JavaScript bootstrap file (typically we try to set up Laravel Echo in which we add the following configuration:

```
import Echo from 'laravel-echo';

window.Pusher = require('pusher-js');

window.Echo = new Echo({

    broadcaster: 'pusher',

     key: process.env.MIX_PUSHER_APP_KEY, // Ensure that these environment variables are properly set in your .env and mix file

    cluster: process.env.MIX_PUSHER_APP_CLUSTER,

    forceTLS: true

});
```
