Now here, we must ensure that the corresponding environment variables and are defined in your **.env** file and that your **webpack.mix.js** is set to copy these variables into your JavaScript bundle.

Broadcast Event Listening

To do this, make use of Laravel Echo in our javascript file to subscribe to the "chat" channel and listen for the event:

```
window.Echo.channel('chat')

    .listen('.new.chat.message', (e) => {

        console.log('New chat message received:', e);

        // Optionally, update the UI with the new message.

        let messageElement = document.createElement('div');

        messageElement.innerHTML = `${e.sender}:
${e.message}`;
```
