```
        document.getElementById('chat-
messages').appendChild(messageElement);

         // For a visual cue, you can trigger a push notification
sound or a UI alert.

        // Example: display a toast notification

        // showToastNotification(`New message from
${e.sender}: ${e.message}`);

    });
```

Now in your Blade view (for example, we need to make saure that we have an element with the ID **chat-messages** where the messages will be appended:

```
html>

lang="en">
```
