This creates the necessary tables and config files. After this, we open the browser and navigate to:

---

http://127.0.0.1:8000/telescope

This dashboard provides a comprehensive view of HTTP requests, queries, exceptions, and more.

System-Level Metrics

While Telescope and Debugbar focus on application-level performance, you can also check system-level metrics on your Linux server as supplementary confirmation. To do this, first open a separate terminal window and run the following commands:

---

top

This shows real-time CPU and memory usage across processes.
