```
php artisan make:job GenerateReportJob
```

This creates a new job class file at **app/Jobs/GenerateReportJob.php** that you will use to encapsulate the report generation logic.

Implementing Job Logic

Next, open the **GenerateReportJob.php** and update the class to include the necessary logic to process the report asynchronously. Try to understand from the following sample program:

```
namespace App\Jobs;

use Illuminate\Bus\Queueable;

use Illuminate\Contracts\Queue\ShouldQueue;

use Illuminate\Foundation\Bus\Dispatchable;
```
