Here, the job accepts a report identifier and simulates a time-consuming task using

Dispatching Custom Job

In a controller method say, within can dispatch this job to the queue. To do this, you need to add a method to trigger the report generation in your controller file as shown below:

```
namespace App\Http\Controllers;

use App\Jobs\GenerateReportJob;

use Illuminate\Http\Request;

class ReportController extends Controller

{

    public function generateReport(Request $request)

    {
```
